

Dear Brett,

I hope you are doing well and that the post-launch period for Impact has been treating you smoothly. I am genuinely looking forward to trying the diverse interactive elements, especially the way the exhibition connects with visitors through personalized Cretaceous species and turns a simple question about which species survived the impact into something visually engaging and fun. The Planetary Defense section also really piques my curiosity, I'd love to learn more about how it came together.

Our recent half-hour conversation that effortlessly became more than an hour has stayed with me. It gave me a much clearer sense of how Media Exhibition at a natural history museum approaches its work, and it strengthened my interest in contributing. The balance you described between scientific accuracy and creative interpretation (such as the coexistence of grass and Pterosaurs in *FLAP*) sounds like exactly the kind of work I want to be part of.

Now that I have a better understanding of my year ahead, and with a spontaneous winter trip coming together, I wanted to move forward with my internship application for your department. My CV is attached, along with screenshots containing all essential information from the small website I built for this application.

Furthermore, I very spontaneously will be in New York from December 13 to January 11 and, as you kindly offered, I would be very happy to stop by and visit the department if there is a moment that works for you.

I would be glad to hear from you and would love to reconnect while I am in New York.

Best regards,  
Lynn Limbach
